# Truck ► HFC 129 3 FRONT MOUNT CYLINDER

#### WITH OUTER COVER

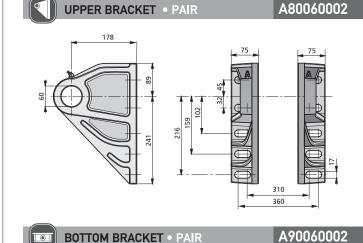

EFFECTIVE DIAMETER [mm] 129 - 111 - 95

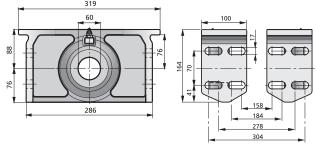

#### **OPTIONAL**

OIL PORT FOR DESCENT CONTROL VALVE DESCENT CONTROL VALVE KIT ADG100001

#### **ACCESSORIES**

**Caution for Upper and Bottom Brackets** 

Recommended backlash between pin over-bosses and brackets / supports = 3 mm total (1.5 mm each side). It is recommended to fit M16 bolts/nuts, type 8.8 or better.

#### Pull-out

Dimension marked as **B** (closed centre dimension) refers to cylinder completely closed.

It is recommended to fit the cylinder with 20-25 mm pull-out more than the specified **B** dimension, in order to avoid unwanted loads on internal steel stop rings when tipper body is fully loaded.

All front mount Penta cylinders have the piston rod hard chrome plated, to ensure better resistance to corrosion and longer lifetime to the seals (the seal set of the piston rod is the most critical, as when the truck is in motion the tipping body can vibrate). Penta do not guarantee standard cylinders against corrosion.

# Truck ► HF 129 3 FRONT MOUNT CYLINDER

#### **PINS TO EYE**

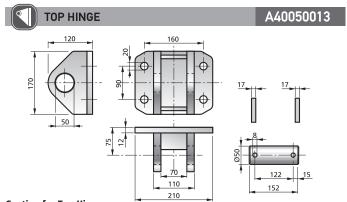

EFFECTIVE DIAMETER [mm] 129 - 111 - 95

**OPTIONAL** 

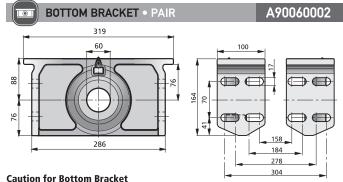

#### **ACCESSORIES**

**Caution for Top Hinge** 

It is recommended the fitment of two spacers ensuring the top bearing to be centered on the support and to swivel properly (+/-7°). These spacers are included.

**Caution for Bottom Bracket** 

Recommended backlash between pin over-bosses and brackets / supports = 3 mm total (1.5 mm each side). It is recommended to fit M16 bolts/nuts, type 8.8 or better.

Dimension marked as A (closed centre dimension) refers to cylinder completely closed.

It is recommended to fit the cylinder with 20-25 mm pull-out more than the specified A dimension, in order to avoid unwanted loads on internal steel stop rings when tipper body is fully loaded.

All front mount Penta cylinders have the piston rod hard chrome plated, to ensure better resistance to corrosion and longer lifetime to the seals (the seal set of the piston rod is the most critical, as when the truck is in motion the tipping body can vibrate). Penta do not guarantee standard cylinders against corrosion.

FLOW RATE	[lt/min]	130
MAX WORKING PRESSURE	[bar]	350
MAX PEAK PRESSURE (< 0.1s)	[bar]	500
T PORT MAX PRESSURE	[bar]	30
MINERAL OIL		ISO VG 46

FLUID TEMPERATURE	[°C (t)]	-25 / +80
VISCOSITY RANGE	[cSt]	12-100
FILTERING ISO 4006 Bx=75	[µm]	20-17 25
WEIGHT	[kg]	4.5
MAX PNEUMATIC WORKING PRESSURE	[bar]	12

- Pneumatic or mechanical operated 130 l/min distributor, for tipping vehicles, with tractor only.
- It performs tipping, fast lowering and progressive lowering (by means of mechanical control cable TXZ or the progressive pneumatic control like CP/DP).
  The inlet check valve and the adjustable relief valve are built-in.
  The relief valve range is from 140-220 bar (std.=200 bar) or (upon request) from 220-350 bar (std.=250 bar).

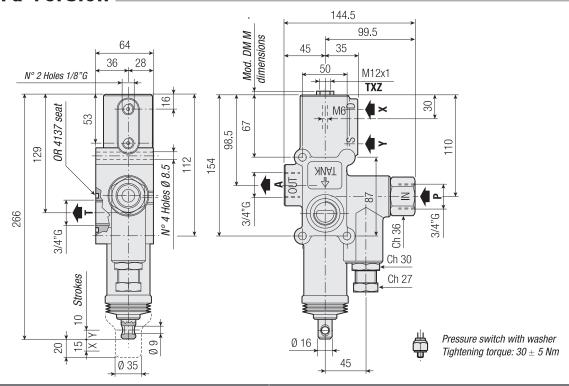

- End-of-stroke rope or protection cup.
  Flange connection to tank or chassis is available.
- Upon request manometer or pressure switch gauge.

Penta Body Clamp See page 36

# Trailer ► HFC 191 5 FRONT MOUNT CYLINDER

#### WITH OUTER COVER

EFFECTIVE DIAMETER [mm] 191 - 169 - 149 - 129 - 111

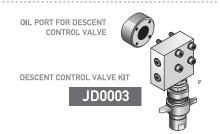

#### **ACCESSORIES**

**Caution for Upper and Bottom Brackets** 

Recommended backlash between pin over-bosses and brackets / supports = 3 mm total (1.5 mm each side). It is recommended to fit M16 bolts/nuts, type 8.8 or better.

#### **OPTIONAL**

#### Pull-out

Dimension marked as  ${\bf B}$  (closed centre dimension) refers to cylinder completely closed.

It is recommended to fit the cylinder with 20-25 mm pull-out more than the specified **B** dimension, in order to avoid unwanted loads on internal steel stop rings when tipper body is fully loaded.

#### Chromium Plate

All front mount Penta cylinders have the piston rod hard chrome plated, to ensure better resistance to corrosion and longer lifetime to the seals (the seal set of the piston rod is the most critical, as when the truck is in motion the tipping body can vibrate). Penta do not guarantee standard cylinders against corrosion.

PNEUMATIC WORKING PRESSURE	[bar]	12

- Single acting hydraulic tipping valve with oil flow of 160 l/min, pneumatically controlled.
  Available in two versions: DL with double fixed rising/lowering speed (normal and slow) or proportional DP.
- Inlet check valve and overpressure valve are built-in. Concerning overpressure safety device three different versions are available: adjustable, with interchangeable cartridge and switch (either with 2 or 3 different pressure settings).
- Equipped with end-of-stroke device.
- Flange connection to tank or to chassis.
- Manometer threaded hole provided.
- Several other optional versions available (ordering code).

#### TRUCK-TRAILER KIT

CYLINDERS & WET KITS

# ► NOTES

## WARNINGS

EN The following catalogue is introducing the range of H.S. Penta cylinders and wet kits for tipping application. For an optimum and maximum usage of the cylinder, H.S. Penta is suggesting the fitment in combination with H.S. Penta wet kits. H.S. Penta wet kits are designed for maximum efficiency and best response in every circumstances. The complete body tipping system is consisting of a cylinder and a hydraulic system which includes: pump, oil tank with return filter, hydraulic distributor (tipping/control valve) provided of a maximum valve (relief valve) pre-set, pneumatic cab control and hydraulic/pneumatic connections. On request it can be completed with: PTO depending on the gear box model, end of stroke device, oil divertors for truck and trailer application, cylinders for tail-door hydraulic locking, cylinders for hydraulic tail-door opening, power packs and many other optional devices.

Telescopic cylinders and wet kit are commonly installed on dumping vehicles and are devices which are intended to provide only a lifting force. The machinery into which the cylinders and wet kit are incorporated must comply with the requirements of the in force directives and norms. The cylinder is not a structural member, and is not designed, nor intended to provide stability to the dumping vehicle. Failure to comply with the following instructions will void the product warranty and cancel any liability for any consequence.

**Using Conditions:** telescopic cylinder are designed to suit tipping operation on tipping vehicle bodies in order to obtain a progressive unload of the material contained in the body, along the full stroke of the cylinder in respect of the using conditions.

The weight of the body in addition to the weight of the material loaded on the body results in the total weight to be tipped-up. The amount of mentioned weights (values) are indicating maximum performances which can be obtained during a tipping time in normal conditions. The cylinder is dimensioned to support stresses on its longitudinal center line and must not be subjected to any other different kind of mechanical stress (e.g.: side loads).

The aim of the wet kit is to drive the cylinder and consequentially the tipping body. The wet kit main components (such as pump, tipping valve and hoses) are dimensioned to withstand cylinder maximum pressure and tipping capacity. The oil tank is dimensioned in order to have sufficient oil capacity to feed: cylinder, hydraulic components and hoses without interruption of the cylinder operative conditions.

#### The following are essential hints for the correct assembling of the cylinder and wet kit:

- During the assembling operations, ensure that cylinder and hoses are properly protected from any contamination such as weld drops, metal shavings or any other foreigner particles.
- 2. Make sure to hydraulic circuit is always provided of a maximum valve (relief valve). All tipping valves supplied by H.S. Penta are provided of the maximum valve (relief valve) which is set by H.S. Penta to the cylinder operative pressure in order to benefit of the optimum operation of the circuit. It is strictly prohibited to tamper the original valve setting.
- 3. Take care of the hydraulic circuit ensuring the oil tank and hoses are perfectly cleaned and by using premium quality hydraulic oils for hydraulic circuits. Oil tanks supplied by H.S.Penta are provided of a return filter (filtration 25µm) able to keep the circuit dean by contaminations, it is recommended to check the grade of clogging of the filter and its replacement every six months. Ensure to use only hydraulic oils which are fully meeting the requirements specified in enclosure: "Installation manual hydraulic kit for tractors". Never use coolants or additives and never mix different substances together. Replace the oil every year.

- The body must never lay on the cylinder when in rest position. The cylinder must always be fitted with 20mm pull-out.
- Ensure that the axial play between the inner surface of the brackets and the overbosses of the cylinder is always inferior to 2mm.
- 6. Never wash the cylinder with high pressure water guns and arrange proper protection during welding or grinding operations. It is strictly prohibited to connect the welding machine ground cable to the cylinder.
- Weekly: grease all cylinder swivelling parts and its accessories. Monthly: check the fixing torque of the bracket and chassis cradles bolts.
- 8. Never leave the body raised (if not for normal tipping procedures) to avoid damages to the cylinder.
- Check frequently the correct functioning of the tipping valve and end of stroke device (if available).
- 10. To avoid sudden falls of the body (eg.: in case of hose burst or sudden fitting disconnection), on H.S.Penta cylinders it is possible to fit a C.B.S. device (Cylinder Blocking System) produced and patented by H.S.Penta.
- 11. To manage smooth and constant lowering speed of the body independently from the amount of payload, H.S. Penta cylinders can be fitted with V.C.D. Device (Descent Control Valve) produced by H.S.Penta.
- 12. All front mount cylinders produced by H.S. Penta have the last step (smaller inner) chromium plated.
- All H.S. Penta cylinders are painted with a anti-rust synthetic primer with vinyl co-polymer base.
- 14. All pumps are mono-directional. For the correct use in combination with PTO's it is necessary to check the correct rotation sense. Before starting the circuit, make sure the pump is completely filled up with oil either by bleeding the air from the drainage plug or filling it up in advance. During normal system operation it is recommended a suction pressure of 0.7-1.5 bar, a working viscosity range of 9-100cSt and a fluid temperature range of -25°/+80°C. Screw on the pump only gas-cylindrical (BSP) frontal sealing fittings, do not fit any fittings with conical thread (NPT).
- 15. Hoses: avoid elbows or restrictions. It is not recommended to put any filtration on the suction line as it can result in pump cavitation. All hoses are dimensioned to suit the cylinder working pressure.

The failure in respecting one or more of the above recommendations and rules is resulting in the automatic expiry of the warranty on both cylinder and wet kit.

#### For further information please see:

- Hydraulic cylinder for tipping equipment user & maintenance manual -General safety regulations.
- Installation manual hydraulic kit for tractors.
- Service Manual

## **GUARANTEE**

#### 1. Guarantee conditions

- 1.1 H.S.PENTA S.P.A. (hereinafter referred to as the "Company") guarantees the satisfactory operation of its hydraulic components, hydraulic cylinders, and respective accessories (hereinafter jointly referred to as the "Products") and the absence of flaws and defects in the same within the limits specified in these General Guarantee Conditions.
- 1.2 This guarantee of satisfactory operation has a validity of two (2) years from the date of sale of the Products.
- 1.3 The Company guarantees the conformity of the Products exclusively to Italian and European Community standards.

#### 2. Guarantee coverage

- 2.1 Without prejudice to the content of the following Article 2.2 regarding hidden defects, the Products will be considered as having been accepted by the purchaser whenever within 5 days from delivery such latter has not provided the Company with written notice of the presence of flaws and/or defects.
- 2.2 Upon pain of relinquishing rights to coverage under the guarantee, the purchaser must provide the Company with written notice of the defect in conformity and/or flaw in the Product or part of the same, specifying the nature of the same in detail within 8 days of the date in which the purchaser has observed such defect in conformity and/or flaw.
- 2.3 The defective Products reported in such notice as per the sense and effect of Article 2.2 above must be conserved by the purchaser for the purpose of examination by the Company.
  - Following written request from the Company, the purchaser must send the defective Product(s) carriage paid to the latter or the party indicated by the same; whenever after the Company's examination, the Product is declared defective and as such is covered by these General Guarantee Conditions, the Company will reimburse the purchaser for the costs of shipping, while remaining expressly specified that such shipping costs must be within the average reference costs.
  - The purchaser relinquishes the right to coverage under guarantee whenever he does not permit every reasonable inspection of the Product requested by the Company or whenever after receiving written request from the Company for the return of the Product he fails to do so within 30 days of receiving such request.
- 2.4 Following transmission of due notice by the purchaser performed as per the sense and effect of previous Article 2.2, after ascertaining the existence of the defect or flaw, the Company can take any of the following courses of action at its own discretion:
  - (a) provide the purchaser with Products in replacement of those defective free-of-charge;
  - (b) repair the Products directly or through third parties at its own expense; or
  - (c) reimburse the price paid by the purchaser for the Products ascertained defective.
  - It is hereby agreed that any Products supplied in replacement of those proven defective must by shipped "ex-works" and that the defective Products returned to the Company will remain the property of such latter.
- 2.5 With the exception of those mentioned in Article 2.4 above, the costs and expenses incurred by the replacement or repair of the defective Products must be borne by the purchaser.
  - For mere purposes of example without excluding others, the purchaser must bear the costs for:
  - (a) consumptions caused by the removal of the defective Products from the machinery in which they were installed and the subsequent re-installation of the same;
  - (b) the transport of materials and/or equipment;

- (c) lubricants and/or expendable materials necessary for the replacement or repair of the defective Products:
- (d) the re-painting of the Products;
- (e) the transfer expenses of the Company's personnel during checking for flaws and defects reported by the purchaser.
- 2.6 Nothing will be due to the purchaser by way of compensation for the time that the machinery in which the defective Products are installed remain out of operation for the repair or replacement of the same, and the Company must be considered expressly released from liability for any direct or indirect damage, cost or expense derived by such machinery inactivity.
- 2.7 For the parts of the Product replaced or repaired, the guarantee will be automatically extended for a new 2-year period from the date of such replacement or repair.
- 2.8 Except in case of fraudulent intention or serious neglect, the Company will not be liable in any way for any direct or indirect damage, cost, loss, or expense to persons and/or property derived from the operation and use of the Products and/or the interruption of activity of the machinery in which the Products are installed, given that the guarantee specified in Article 2 is the only remedy in the purchaser's favour.

#### 3. Guarantee exclusion

- 3.1 The Company will not provide guarantee coverage for defects in conformity and/or flaws in the Product or any of its parts for any of the following cases:
  - (a) reasons due or linked to normal wear
  - (b) the failure of the purchaser to correctly perform the procedures for the installation, use (or equivalent), and maintenance of the Products specified in the Use and Maintenance manual provided by the Company together with the Products:
  - (c) the incorrect use and/or operation of the Products or accident caused by the negligence, inexperience, or imprudence of the purchaser;
  - (d) the inadequate maintenance of the Products by the purchaser or modifications, repair and/or replacement made by the same without the Company's written consent:
  - (e) shock or impact against the vehicle or machinery in which the Products are installed; and
  - (f) causes other than defects in fabrication and/or engineering, working, and/or materials.
- 3.2 Guarantee coverage will also be excluded whenever:
  - (a) the Company is not placed in the conditions to promptly perform the necessary repair or replacement of defective Products;
  - (b) the Products are modified by the purchaser:
  - (c) the Products are used after the discovery of a flaw or defect;
  - (d) Repairs that are not authorized by the Company are made;
  - (e) the flaw or defect regards paint coatings and/or is represented by the corrosion of parts of the Product coated or not coated.

#### 4. Applicable Law - Controversy

- 4.1 These General Guarantee Conditions are regulated by Italian Law with the express exclusion of the application of the United Nations Convention on international movable property sales contracts.
- 4.2 Any controversy derived from these General Guarantee Conditions, including those regarding their validity, interpretation, execution and resolution that cannot be settled out of court will be subjected to the exclusive decision of the Court of Ravenna, Italy.
